PROFESSIONAL SUMMARY

Detail-oriented Web Developer & Network Engineer with hands-on experience designing modern frontend web applications, full-stack systems, and secure Cisco network infrastructures. Skilled at bridging software engineering, database management, and system architecture to deliver robust enterprise solutions like financial management tools and agency web platforms. Passionate about leveraging artificial intelligence, virtualization, and modern developer tools to build high-performance systems.

TECHNICAL SKILLS & TOOLS

Frontend Development: React.js, JavaScript (ES6+), HTML5, CSS3, Modern CSS (Flexbox, Grid), REST APIs

Backend & Databases: Node.js, Express.js, MySQL, Firebase, Database Schema Design

Networking & Security: Cisco Routers & Switches, VLAN Segmentation, Subnetting, DHCP, NAT, Inter-VLAN Routing, Network Security

Systems & Virtualization: Linux (Ubuntu/Debian), Proxmox VE, Virtual Machines (VMs), Containerization (LXC)

Developer Tools & Utilities: Git, GitHub, VS Code, Cisco Packet Tracer, Postman, npm/yarn, Vite, Bash Terminal

KEY PROJECTS & DEVELOPED SYSTEMS

Anso Loan Management System | React.js, Node.js, MySQL, REST APIs

Architected and developed a full-stack financial software system to automate loan application tracking, repayment schedules, and client management.

Engineered secure user authentication workflows and structured database tables in MySQL for tracking transactions and interest calculations.

Integrated responsive dashboards displaying real-time financial metrics, balance tracking, and status reports.

Anso Tech Web Platform | React.js, CSS3, Node.js, Web Hosting

Built and deployed the official agency/company web platform for Anso Tech to showcase digital solutions, networking services, and IT consulting capabilities.

Designed dynamic service catalog pages and lead-generation contact workflows to boost user conversion.

Optimized assets and code structure for maximum SEO visibility, fast initial render times, and mobile responsiveness.

AI Student Performance Predictor | Python, Machine Learning, Data Processing

Developed a predictive analytics machine learning system to process academic metrics and evaluate student performance trends.

Built automated data pipelines to clean, preprocess, and train predictive models for output accuracy.

Campus Network Infrastructure Design | Cisco Packet Tracer, VLANs, NAT, DHCP

Designed a enterprise-grade multi-subnet corporate network featuring VLAN segmentation for organizational isolation.

Configured dynamic DHCP pools, Network Address Translation (NAT), and secure routing protocols for internet access.

Proxmox Virtualization Lab | Proxmox VE, Linux, Containerization

Configured a bare-metal Proxmox environment to host and manage virtual machines and LXC containers for staging web apps.

EDUCATION

Bachelor of Science in Information Technology (or your current degree)

University Name | Graduation Year (or Expected)

Relevant Coursework: Web Engineering, Database Systems, Computer Networks, Operating Systems, Software Engineering.

CERTIFICATIONS & TRAINING

Cisco Certified Network Associate (CCNA) (In Progress / Completed)

Full-Stack Web Development Certification

Linux System Administration & Shell Scripting
